

Hsp60/10 Client Network Abundance Tracks Cognitive Preservation

Network-level decline is accompanied by cognition-prioritized mitochondrial client classes in ROSMAP

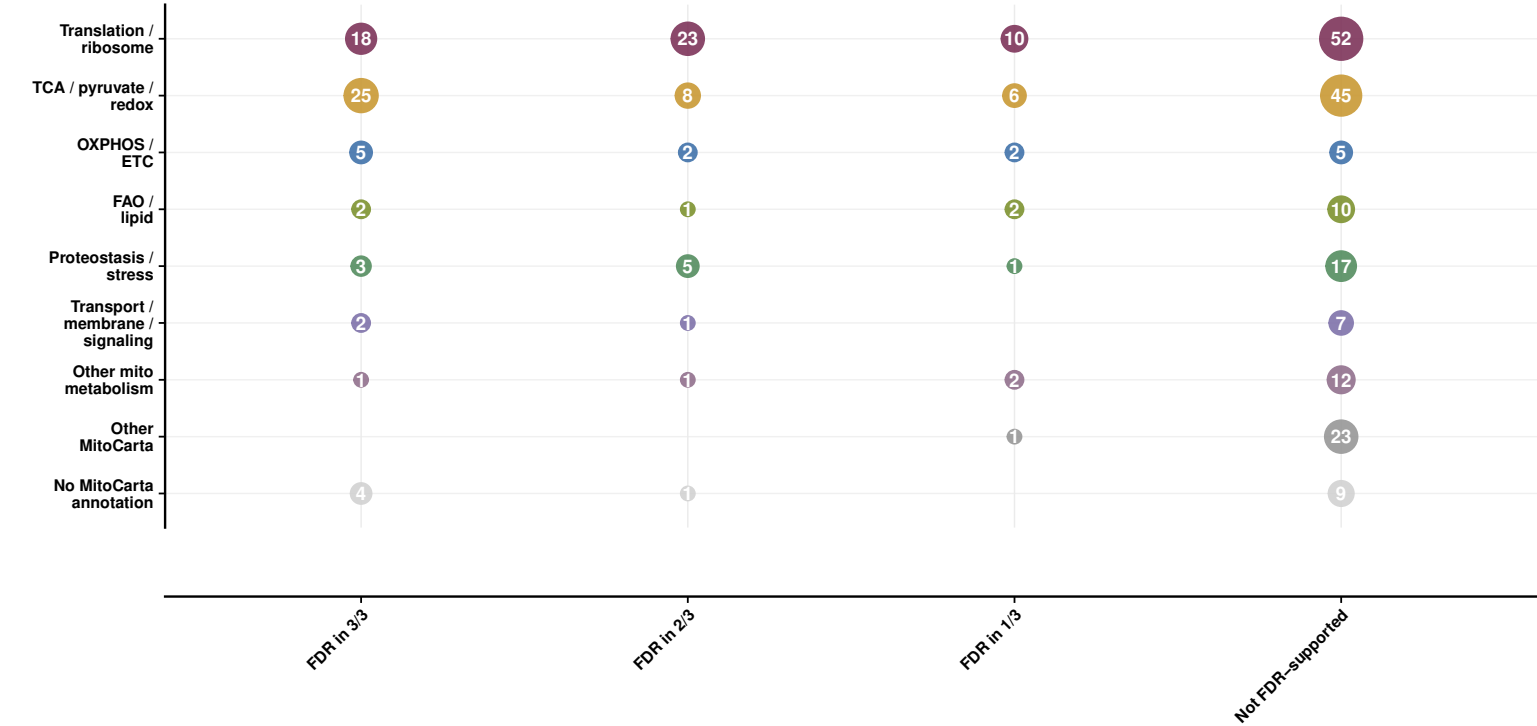

A. Client network abundance declines with cognitive impairment

Adjusted Hsp60/10 score across final cognitive diagnosis

C. Cognition-supported client classes

Counts show all detected clients by MitoCarta class and number of FDR-supported cognition outcomes

B. Cognition-prioritized clients show consistent effects across outcomes

Top 25 clients; dot size = -log10(FDR); right column = number of FDR-supported outcomes
