

Hsp60/10 client vulnerability is selective across the full client network

Late-stage protein decline is heterogeneous; strongly late-declining clients show greater network centrality.

A. Late-stage decline is heterogeneous across the Hsp60/10 client network

All detected Hsp60/10 clients are ranked by late-stage protein decline; red marks the top quartile.

B. Network centrality

Top-quartile late-declining clients occupy more central positions in the client network.
