rsus−MCI lower−abundance magnitude is associated with both tau a

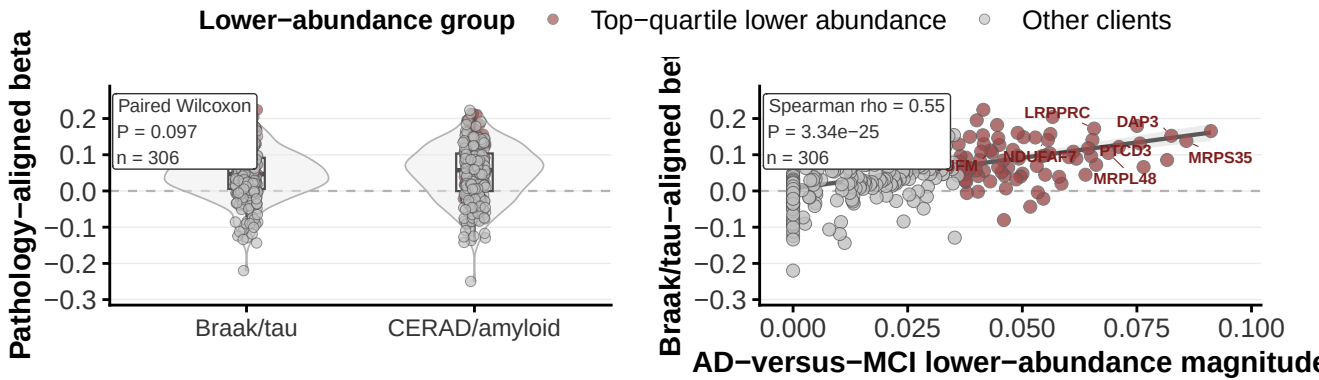

D/amyloid were modeled separately. Positive pathology−aligned beta indicates lower protein abundance w

A. Pathology−aligned protein associatio

Positive beta indicates lower protein abundance with worse pathology

B. Associations with AD lower-abundan

High pathology−aligned beta indicates lower p

C. AD−versus−MCI lower abundance is associated with CERAD/amyloid−a

Because lower CERAD scores indicate worse pathology, positive beta is the pathology−aligned lower−a
