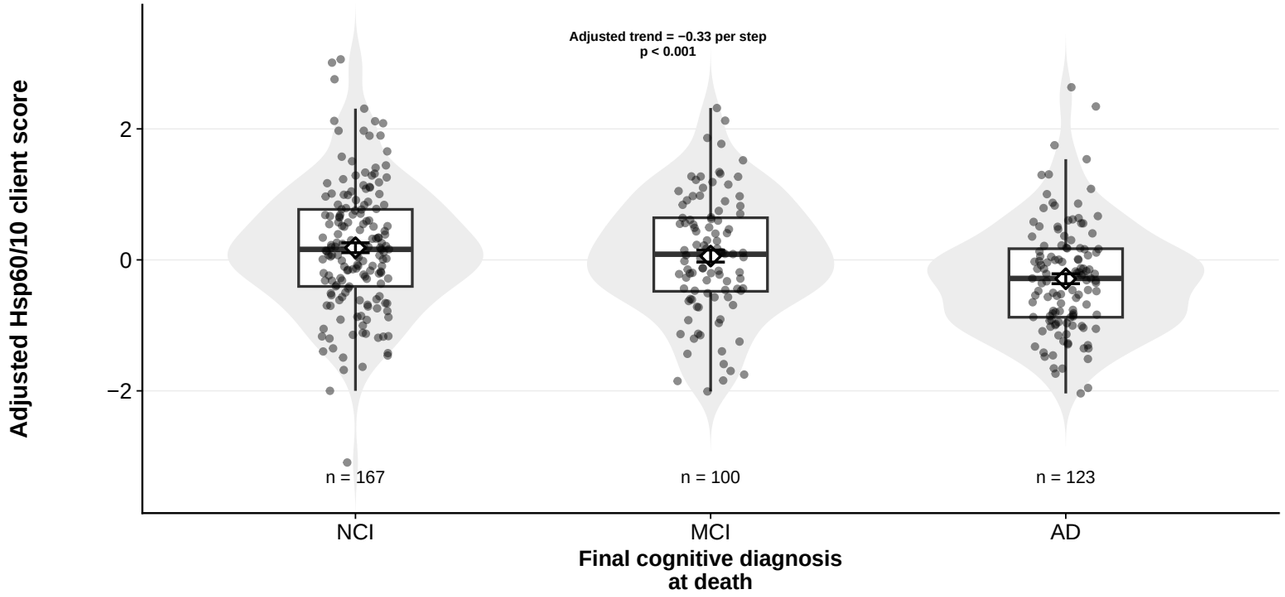
Hsp60/10 Client Network Abundance Tracks Cognitive Preservation

Lower network abundance is accompanied by cognition−prioritized mitochondrial client classes in ROSMAP

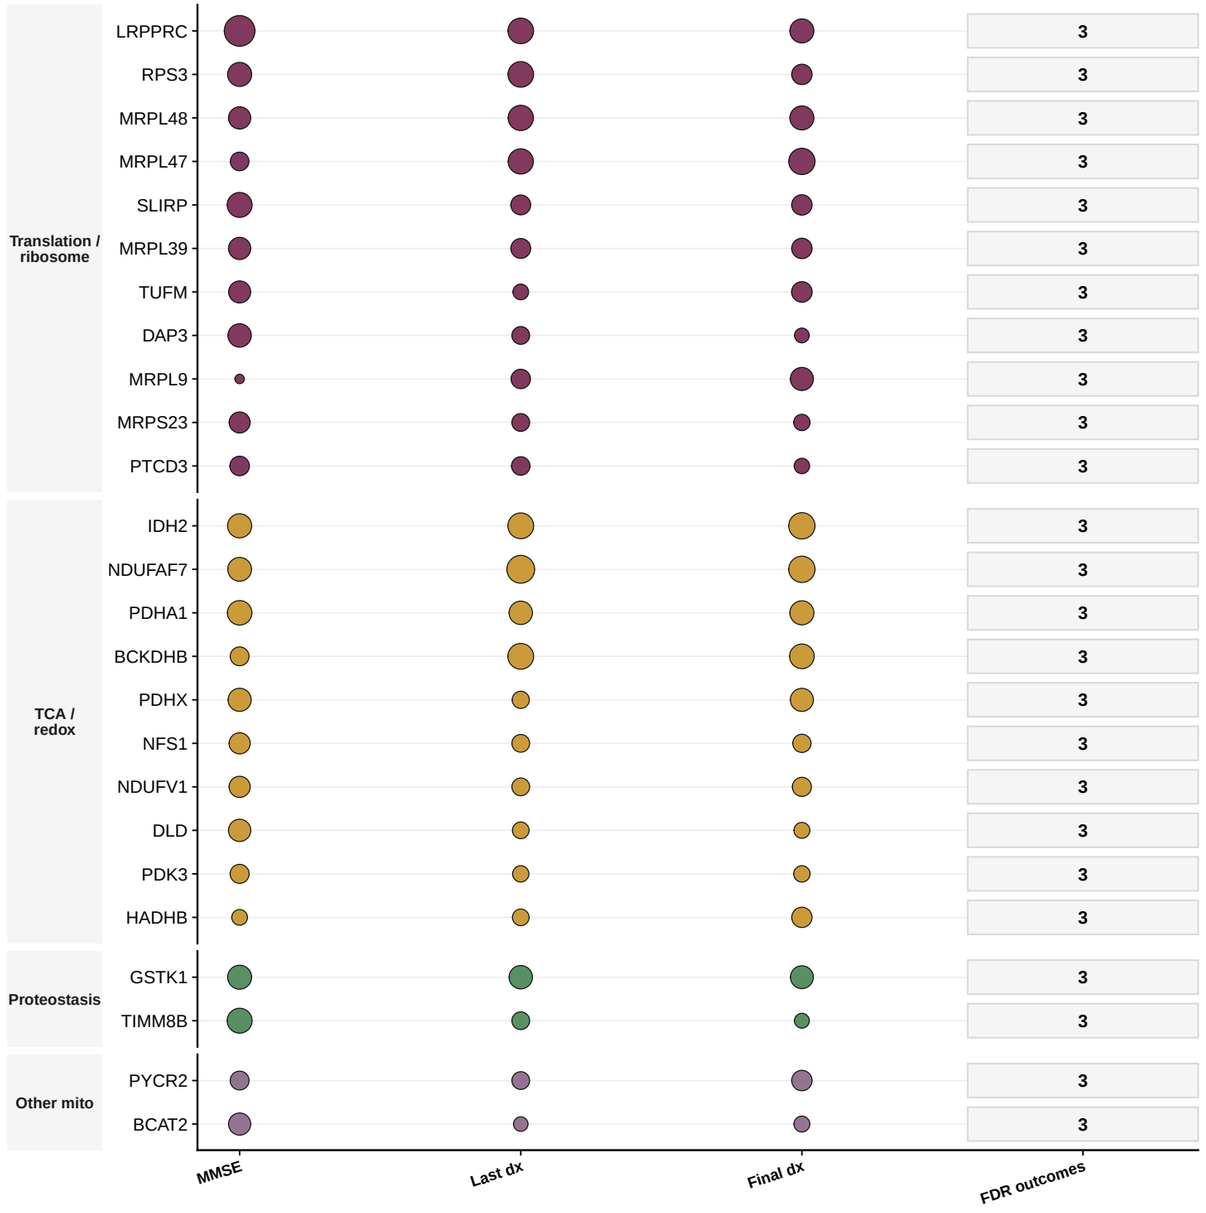
A. Client network abundance is lower with cognitive impairment

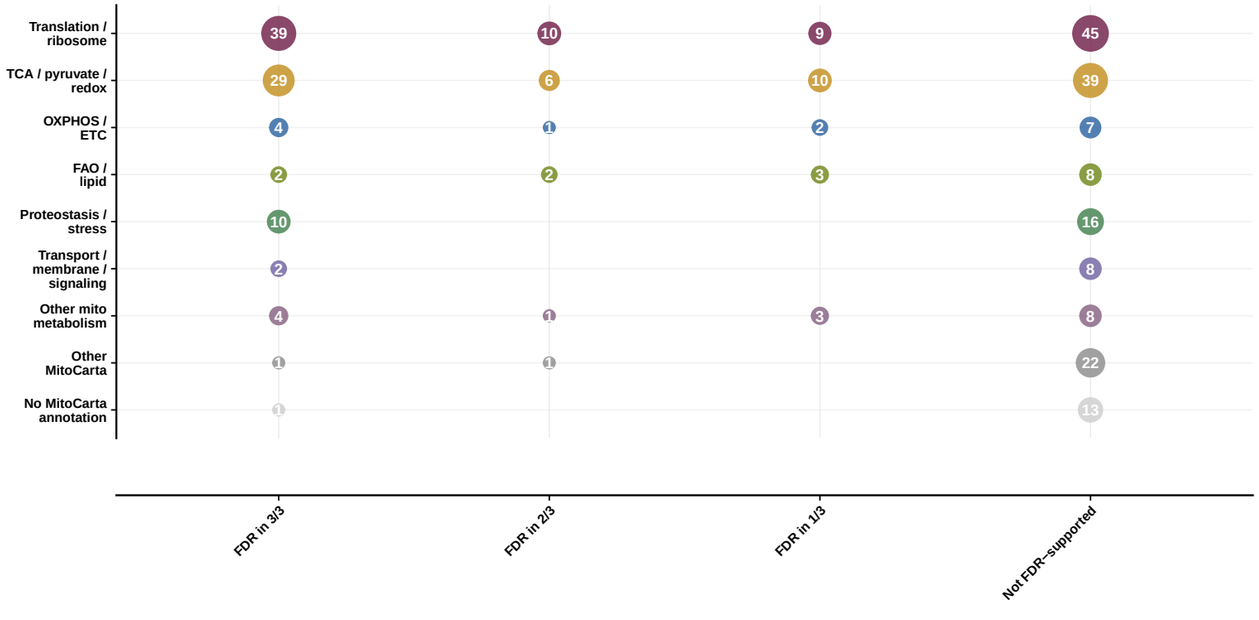
Adjusted Hsp60/10 score across final cognitive diagnosis

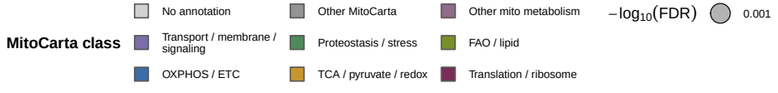


B. Cognition−prioritized clients show consistent effects across outcomes

Top 25 clients; dot size = −log10(FDR); right column = number of FDR−supported outcomes



C. Cognition−supported client classes




Counts show all detected clients by MitoCarta class and number of FDR−supported cognition outcomes
